

ILM SIZE CHART DOCUMENTATION

New in version 5.1

- **Create with AI** in 3 easy steps: pick the product, pick a look, name the chart (Section 4.2).
- **AI Design Assistant** reads pictures: attach a photo or screenshot of a size chart and the assistant copies its sizes and look (Section 4.3).
- **Find my size** — shoppers enter their measurements, or their height and weight, and get their size from the chart (Section 3.1).
- **Apply Constrain** — show a chart only on products that match all of its display rules (Section 3.4).
- The back office is translated into French, German, Spanish, Italian, Dutch, Polish, Portuguese and Russian.

New in version 5

- **Sizechart Designer** — build each chart from rows and columns holding tables, tabs, pictures, videos, iframes and text, with undo and redo (Section 3.3).
- **Tables with unit switch** — paste sizes straight from Excel or Google Sheets, add cm / inch (or any other) units and let the shopper switch between them (Section 3.3).
- **Themes** — 13 ready-made looks: give your tables a look in one click, or add a complete ready-made block and fill in your sizes (Section 3.3).
- **Popup Button designer** — design the button, its icon, the popup window and its close button with a live preview (Section 3.2).
- **Display rules for products, categories, brands, suppliers and features**, with a priority that decides which chart a product shows (Section 3.4).
- **AI assistant** — let AI draft a complete size chart or change the design you are working on (Section 4).

Works on PrestaShop 1.7.0 to 9.x, with the Classic and Hummingbird themes.

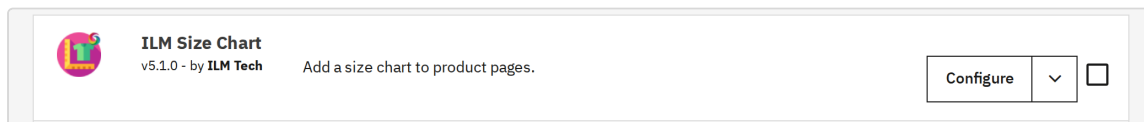

1. Installation and licence
2. The size chart list
3. Creating a size chart — the four tabs (General, Popup Button, Sizechart Designer, Display Rule)
4. AI assistant
5. Seeing it in action on the storefront
6. Uninstallation

1. Installation and licence

Step 1: Download `ilmsizechart.zip`

Step 2: Go to **Backoffice > Modules > Module Manager > Upload a module** > choose the `ilmsizechart.zip` file to upload.

Step 3: Search for `ilmsizechart` in the Module Manager and confirm it is listed as installed, then click **Configure**.

The module listed in Module Manager, ready to configure.

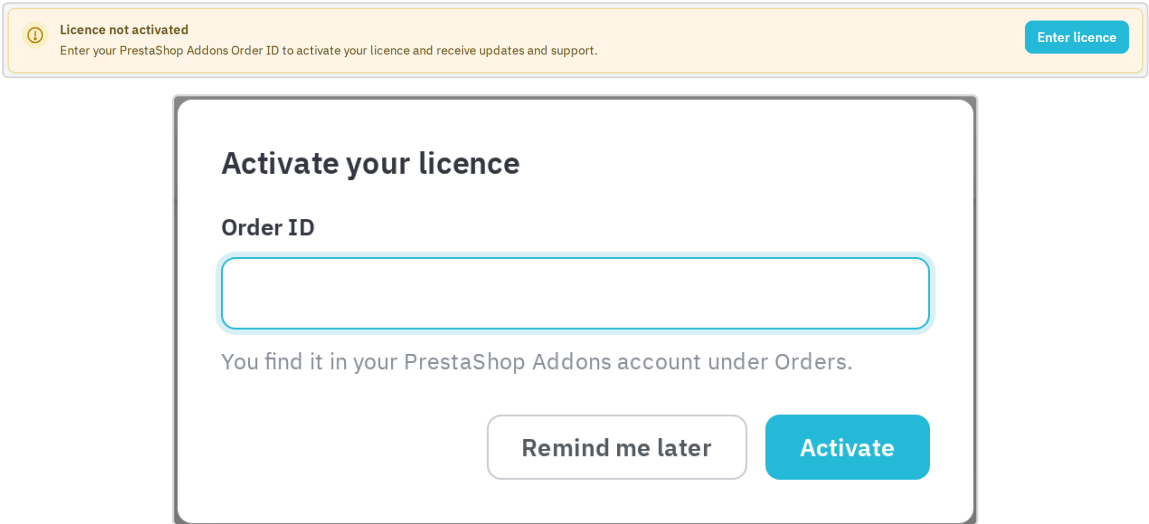

Upgrading: upload the new `ilmsizechart.zip` the same way, over the installed module. Your size charts, designs and display rules are kept.

Upgrading from version 4.x: your size charts are moved to the new Sizechart Designer automatically: tables (with their cm / inch units), texts, the popup button text and icon, display rules and placement. The old data stays in the database table `ilmsizechart_v4_backup`. Two things work differently in version 5:

- **Priority:** the chart with the **highest** number now wins (in version 4 the lowest one did). The upgrade rennumbers your charts so that each product keeps showing the same chart.
- **Combined rules:** a chart that combined several rules (for example a category *and* a brand) is now shown when *any* of its rules matches, and a feature rule now matches every value of that feature. Check such charts in the Display Rule tab after upgrading.

1.1 Activating your licence

At the top of the Configure screen, the module asks for your licence. Click **Enter licence** and type the **Order ID** of your purchase — you find it in your PrestaShop Addons account under **Orders**. The licence gives you updates and support, and switches on the built-in AI (Section 4). **Remind me later** closes the window without activating.

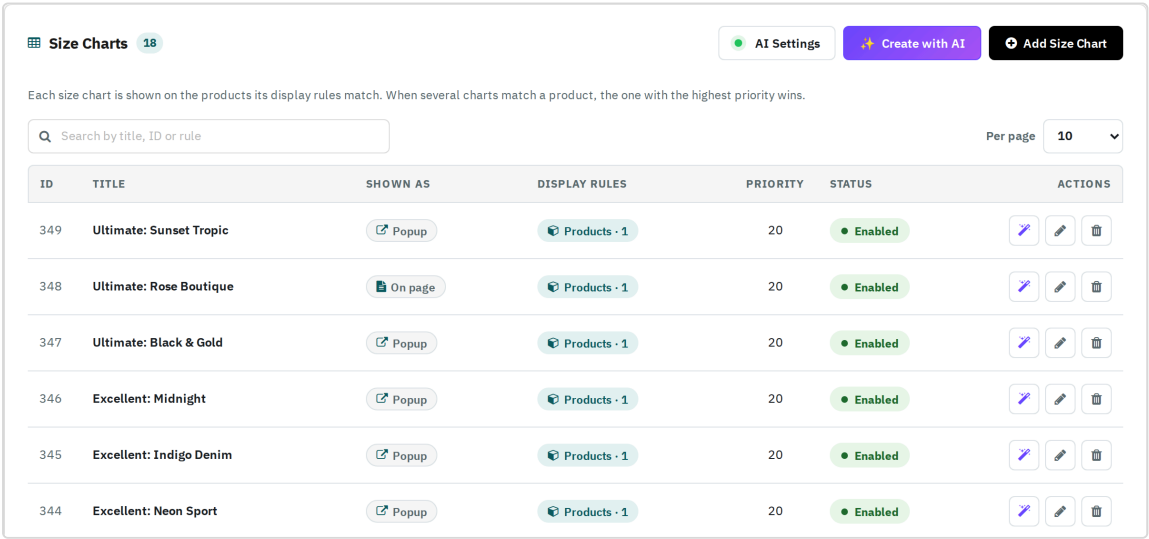

The licence notice and the activation window.

Once activated, the bar shows the order, the shop domain and the date until which support and updates run. If the shop moves to another domain, the bar offers **Move licence to this domain**; **Remove licence from this shop** frees the licence for another shop. Only employees who may install and uninstall modules see the licence bar.

2. The size chart list

The Configure screen opens on the list of your size charts. Each size chart is shown on the products its display rules match; when several charts match a product, the one with the highest priority wins.

Column / button	What it does
Title	The chart's internal title. Click it to edit the chart.

Shown as	Popup : a button on the product page opens the chart in a window. On page : the chart is shown directly on the product page.
Display rules	Which rules the chart uses and how many items each one lists, e.g. <i>Categories · 1</i> . <i>No rule - not shown</i> means the chart is not shown on any product yet.
Priority	Decides which chart a product shows when several charts match it (higher wins).
Status	Click Enabled / Disabled to switch a chart on or off. A disabled chart is kept but never shown in the shop.
Actions	The AI button opens the chart with the AI Design Assistant (Section 4.3); the pencil edits the chart; the bin deletes it. Deleting asks for confirmation and cannot be undone.
Search	Type part of a title, an ID or a rule (for example <i>Brands</i>) to show only the matching charts.
Per page	How many charts each page of the list shows; the page buttons are below the list.
Add Size Chart	Creates a new size chart.
Create with AI	Creates a size chart with AI in three steps (Section 4.2).
AI Settings	Chooses the AI service used by the AI assistant (Section 4.1). The green dot shows that the AI is ready.

3. Creating a size chart — the four tabs

Click **Add Size Chart**, or the title of an existing chart. The edit screen has four tabs. The language selector at the top switches every text field to another shop language, so each chart can be written in all your languages; **Fullscreen** hides the back office menus to give the designer more room. Click **Save** (back to the list) or **Save and stay** when you are done.

The settings are grouped in four sections on the left:

- **Button** — *Basic*: the button title (per language; empty shows the icon only), direction (horizontal, vertical, or a custom angle), alignment and location: at the module's hook position, or **next to a page element** given by a CSS selector, before or after it. Margin and padding. *Text*: font size, font family (theme font or Google Fonts), decoration, transform, letter spacing and line height. *Colors & Border*: text and background colours, border, corner radius and shadow, each for the normal and the mouse-over look, with the transition speed.
- **Icon** — upload your own icon or pick a sample (*None* removes it), remove a white background, and set its size, place (before or after the text), corner radius, spacing, opacity and filter.
- **Popup Window** — *Size & Position*: width, height, minimum and maximum sizes, the place on the screen and what happens when the chart is bigger than the window (scroll). *Style*: padding, border, corner radius, background and text colour, and the page overlay colour and opacity. *Animation*: open and close animation (fade, slide, zoom, bounce) and their speed.
- **Close Button** — its text, colours, size, font, border, corner radius and the offset from the popup's top right corner (negative values move it outside the popup), for the normal and the mouse-over look.

The Popup Window section.

Open popup: the chart in the popup, exactly as the shop will show it.

3.3 Sizechart Designer

The designer builds the chart itself. A chart is made of **rows**; each row has one or more **columns**, and each column holds **components**. What you see in the designer is what the shopper sees.

Undo

Redo

Themes

Add Row

Export

Import

CM

IN

SIZE	S	M	L	XL	XXL
Chest	92	98	104	110	116
Length	68	70	72	74	76
Sleeve	19	20	21	22	23

How to measure

Chest: measure around the fullest part, under the arms.

Length: from the highest point of the shoulder down to the hem.

Between two sizes? Take the larger one for a relaxed fit.

Toolbar button	What it does
Undo / Redo	Takes back the last change, or does it again.
Themes	Ready-made looks for the chart (see below).
Add Row	Adds an empty row at the end of the chart.
Export / Import	Saves the design as a file, or loads a design file — to copy a chart to another chart or shop.

Point at a row or a column to see its tools: drag it to another place, open its settings (spacing, background, border, shadow, column width), or delete it; a column can also be duplicated or hidden. Deleting asks first when the row or column holds components, and a row always keeps at least one column.

Components

Click **Click to add component** in an empty column, or **Add Component** in a column's menu, and pick a type:

Select Component Type

Choose what this place shows. You can edit or remove it at any time.

Table
Sizes in rows and columns, with a cm / in switch

Text Editor
Headings, paragraphs and lists

Image
A measuring guide or a product photo

Video
A video played from its link

Tab
Several contents behind tab titles

Iframe
Another web page shown inside the chart

Component	Use it for
Table	The size table itself, with an optional unit switch.
Tab	Several panels behind tab titles, e.g. <i>Sizes</i> , <i>How to measure</i> , <i>Fit and care</i> . Each tab holds its own components.
Image	A picture, such as a measuring guide. Upload it or pick one from the image library.

Video	A YouTube video, e.g. on how to measure.
Iframe	Another web page shown inside the chart.
Text Editor	Formatted text, such as measuring tips.

Click a component to edit it. Every component has a **Style** tab (spacing, background, border, shadow) and an **Advanced** tab (your own ID, class and CSS).

The **Style** tab: spacing, background, border and box shadow of the component.

Editing a table

	Size	S	M	L	XL	XXL
Chest	92	98	104	110	116	
Length	68	70	72	74	76	
Sleeve	19	20	21	22	23	

- **Basic** — type the sizes into the cells; the + and – buttons add and remove rows and columns. **Paste from Excel / Google Sheets**: select the cells in your spreadsheet, copy them (Ctrl+C) and paste them here — the table content is replaced, in the language selected at the top.
- **Units** — add units such as CM and IN. The first unit is the base unit; the conversion value of each other unit is the multiplier from the base unit (for inches from centimetres: 0.393701). With two or more units, the shopper gets a button group to switch, and every number in the table is converted.
- **Table** — every colour, size and line of the table: layout (width, alignment, first column as a header), header, first column, body, stripes, mouse-over colours, frame and lines, and the look of the unit buttons.

Edit Table

English (English)

Basic

Units

Table

Style

Advanced

Units

+ Add Unit

Unit Title	Conversion Value	Action
CM	1	Base Unit
IN	0.3937	

Note: The first unit is the base unit (conversion value is always 1 and cannot be changed).
 Conversion value is the multiplier to convert from the base unit to this unit.
 Example: If base unit is "cm" and you want "inch", conversion value would be "0.393701" (1 cm = 0.393701 inch)

Delete

Cancel

Save

The Units tab: CM is the base unit, IN converts with 0.3937.

Themes

Themes opens a gallery of 13 ready-made looks, from simple (Normal) to rich (Ultimate). Each card offers two actions:

- **Apply to my tables** — your tables and tabs get the look; your sizes, texts and pictures stay. It asks for confirmation first, and **Undo** takes it back.
- **Add as new row** — adds a ready-made block in that look (tables, unit switch, tips, picture or tabs) to fill in with your sizes.

Tick **Also style the popup button and window** to give the popup button and window the matching colours too.

Size chart themes

Apply to my tables: your tables and tabs get the look, your sizes, texts and pictures stay. Add as new row: a ready-made block with tables, unit switch, tips, picture or tabs in that look, to fill in with your sizes.

SEARCH PRODUCTS

Search by name or reference...Q

SELECTED PRODUCTS

#	PRODUCT NAME	ACTIONS
1	Hummingbird printed t-shirt	Delete

Field	What it does
Enable ... Rule	Yes uses this rule type for the chart. While it is No , the other fields of that rule are hidden.
Show Sizechart to	All ... : every product (or every product with a category, brand, supplier or feature). Selected ... : only the items you pick below.
Search ...	Type at least two letters of a name (or a product reference) and pick from the results. Click the search button or press Enter to search at once.
Selected ...	The items the rule lists; Delete removes one.

- **Products** — the chart shows on the products you pick.
- **Categories** — it shows on products whose default category is a selected category or lies inside one.
- **Brands / Suppliers** — it shows on all products of the selected brands or from the selected suppliers.
- **Features** — it shows on products that have one of the selected features.

The **Apply Constrain** sub-tab (the last one, below Features) decides how several enabled rules work together. **Any** (the default): the chart shows when the product matches any one of the enabled rules. Choose the rule types instead (for example *Categories,Brands*) to show the chart only on products that match all of them — for example only on T-shirts of one brand.

Products1

Categories

Brands

Suppliers

Features

Apply Constrain

APPLY CONSTRAIN

AnyCategories,Brands

Any: Size chart will show if product matches any of the enabled rules.
Categories,Brands: Size chart will show only if product matches all enabled rules.

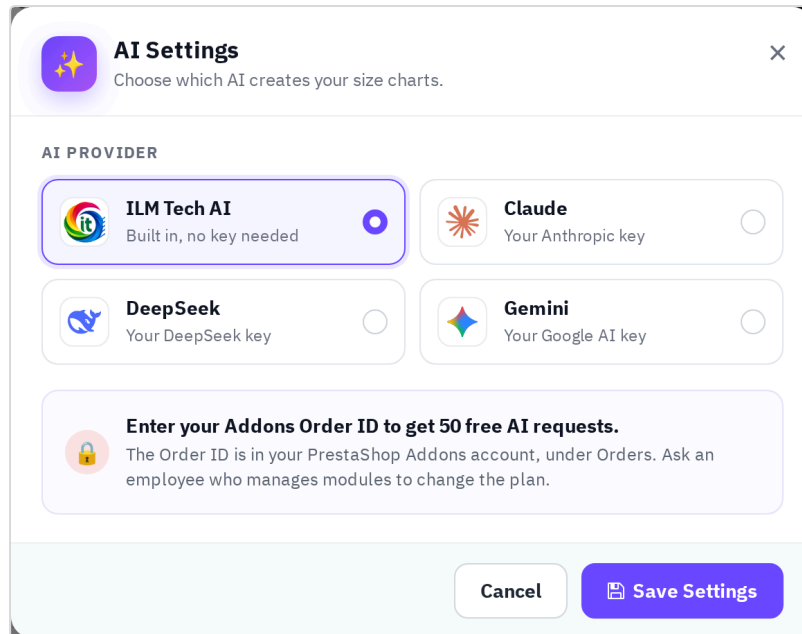

Which chart does a product show? When several charts match a product, the chart with the highest **Priority** (General tab) is shown. When two charts have the same priority, a chart that lists the product (or its feature, category, brand or supplier) beats a chart set to *All*, in this order: product, feature, category, brand, supplier.

4. AI assistant

The AI assistant creates size charts and changes designs for you. It never saves on its own: you see the result in the designer and click **Save** when you are happy with it.

4.1 AI Settings

Click **AI Settings** above the size chart list and choose which AI creates your size charts:

AI Settings ✕

Choose which AI creates your size charts.

AI PROVIDER

ILM Tech AI
Built in, no key needed

☒

Claude
Your Anthropic key

Enter your Addons Order ID to get 50 free AI requests.
The Order ID is in your PrestaShop Addons account, under Orders. Ask an employee who manages modules to change the plan.

Cancel
Save Settings

- **ILM Tech AI** (built in, no key needed): the shop connects with your licence (Section 1.1). Enter your Addons **Order ID** once to get free AI requests. Free requests are given once and work while your support period runs; each size chart created or changed by AI uses one. For more, subscribe to the **Pro** plan (a set number of requests every month) with **Manage plan**, or buy **extra requests**, which are paid once and stay until you use them. The window always shows how many requests are left.
- **Claude** (Anthropic), **DeepSeek** or **Gemini** (Google AI): use your own API key from that provider (**Get key** links to it) and choose a model. There are no limits from ILM Tech; the provider bills you directly.

Test Connection checks the choice, then **Save Settings**. The AI buttons appear once the test has passed.

Privacy: on the free requests, what you ask the AI is kept without your shop name or personal details to help improve the service. Requests on the Pro plan are never saved.

4.2 Create with AI

Click **Create with AI** above the size chart list. Three steps, and one AI request:

1. **What is this size chart for?** Pick the closest product (T-shirts & tops, shirts, pants & jeans, dresses & skirts, shoes, rings, hats & caps, kids clothing, bags & products and more) and who it is for. The AI suggests the sizes and measurements; you can change them, choose the units (cm, inch or a cm + inch switch), and use the real sizes of selected products. Optional: **Copy from a picture** — upload a photo or screenshot of a size chart and the AI copies its sizes.
2. **Pick a look:** one of the colour themes for the table, tabs and Size Guide button (you can change every colour later).
3. **Name it and create:** the chart name, where it shows (all products, or chosen categories, brands ...) and how shoppers open it (button + popup, or on the product page). Add notes for the AI if you like, e.g. a YouTube link for a how-to-measure video.

The AI needs about 20 to 60 seconds. You then see the chart as shoppers will see it, on desktop, tablet or phone; **Open in editor** loads it into the designer, where you change anything and click **Save**.

Create a size chart with AI

3 easy steps. You check the result before anything is saved.

4.3 AI Design Assistant

Inside the Sizechart Designer, the round AI button opens the **AI Design Assistant** (in the list, the AI button of a chart opens it straight away). Describe what to change (“make the header dark blue”, “add an inch unit”, “add a how-to-measure text next to the table”) or click **Attach a picture** to send a picture of a size chart you like: the assistant copies its sizes and look. Each answer that changes the design uses one request; an answer that changes nothing is free. **Undo** takes any change back.

The image is a screenshot of a mobile application interface for an AI design assistant. At the top, a green header bar contains the text "AI Design Assistant" in white, with "ILM Tech AI" in smaller white text below it. On the right side of the header is a white "X" icon. Below the header, a light purple message box contains the text "Enter your Addons Order ID to get 50 free AI requests." in bold black font. Underneath this, a tip is shown with a yellow lock icon and the text "The Order ID is in your PrestaShop Addons account, under Orders. Ask an employee who manages modules to change the plan." in black font. A dashed purple rounded rectangle contains the text "Ask me to check your design or change its look. You can also attach a picture of a size chart and I copy its sizes into your table." in purple font. At the bottom, there is a white text input field with the placeholder text "Describe what you see or what to change..." in gray. To the left of the input field is a small gray square button with a white camera icon. To the right is a green circular button with a white right-pointing arrow.

5. Seeing it in action on the storefront

In popup mode, the button sits on the product page, by the add-to-cart button or wherever you placed it:

p

In page mode, the chart sits on the product page itself, under its heading:

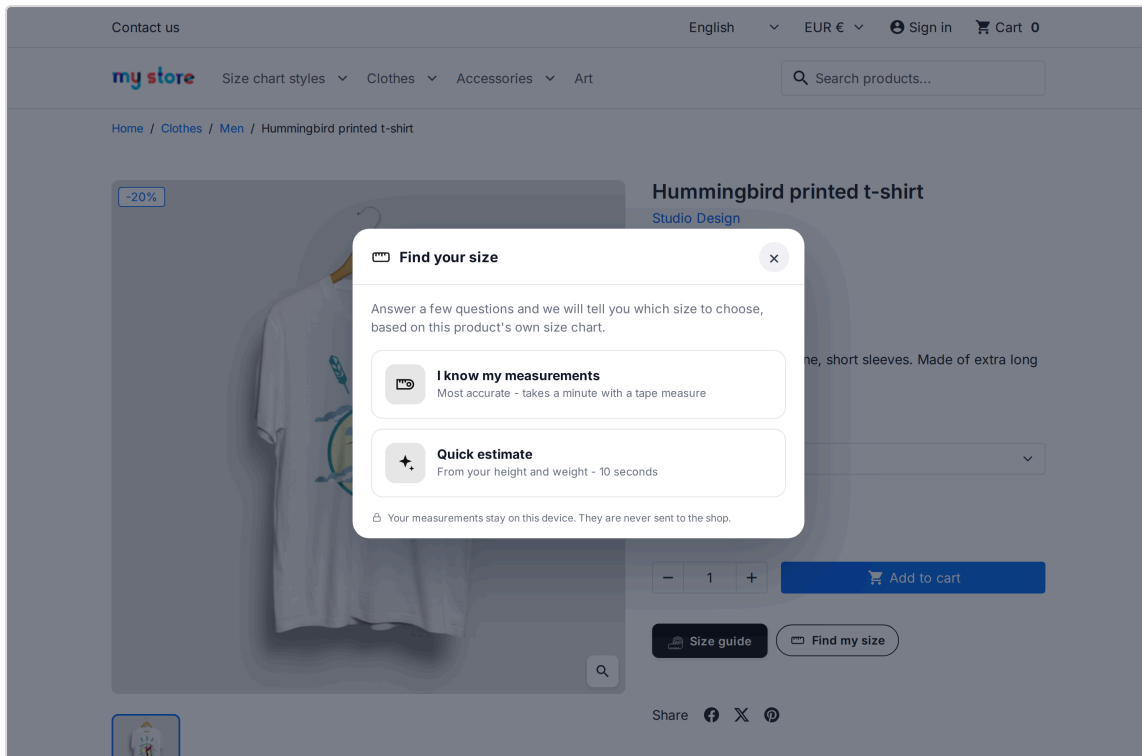

A page-mode chart with three tabs and a unit switch.

A chart built from a theme, with tabs, in the popup:

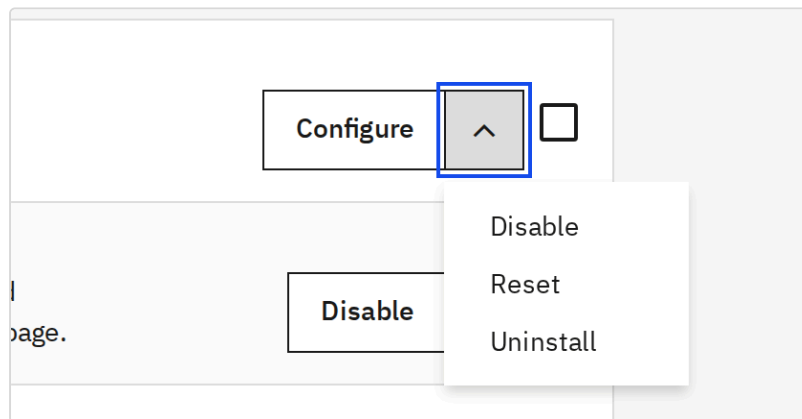

With **Find my size** switched on (Section 3.1), a **Find my size** button sits next to the Size guide button and at the top of the chart. The shopper chooses *I know my measurements* or a *Quick estimate* from height and weight, and gets the size to choose with a short fit explanation. The measurements stay on the shopper's device.

The chart shows in the shopper's language. A text left empty in that language is shown in another language in which it is filled in, so fill in every language your shop uses.

6. Uninstallation

To uninstall the module: go to **Modules > Module Manager**, search `ilmsizechart`, open the dropdown next to **Configure**, and choose **Uninstall**.

Uninstalling removes the module's size charts, designs and settings. To completely remove the module from the server, uninstall it first, then use **Delete** from the same dropdown — this removes the module's files as well.
